Overview

This Pharmacy Management System is a web-based application that allows pharmacy staff to manage all aspects of pharmacy operations including medicines, customers, manufacturers, vendors, and sales. It is built using React (frontend) and Express.js (backend), with JSON file-based data storage.

System Requirements

Requirement	Description
Browser	Chrome / Firefox / Edge
Node.js	v14 or above
Operating System	Windows, macOS, or Linux
Internet Connection	Required for Axios API calls (localhost)

Installation & Setup

A. Clone or Download the Project

```
git clone https://github.com/your-username/pharmacy-management.git
cd pharmacy-management
```

B. Start the Backend Server

```
cd backend
npm install
node server.js
```

Server will run at: <http://localhost:5000>

C. Start the Frontend

```
cd frontend
npm install
npm start
```

Frontend runs at: <http://localhost:3000>

Navigation Guide

Home Page

- Displays welcome message and navigation links.
- Use the navbar to switch between sections.

Navigation Bar

Menu Item	Description
Home	Go back to homepage
Medicines	Add, view, delete medicines
Customers	Manage customer records
Vendors	Add/view vendors supplying medicines
Manufacturers	Add/view manufacturers of medicines
Sales	Record and view medicine sales

Functional Guide

Medicines Module

- **Add Medicine:** Fill the form with name, manufacturer, price, quantity.
- **View Medicines:** See all current medicines with details.
- **Delete:** Remove a medicine entry using the “Delete” button.

Customers Module

- **Add Customer:** Enter customer name and contact.
- **View Customers:** List of all added customers.

Vendors Module

- **Add Vendor:** Input vendor name and contact.
- **View Vendors:** Shows all current vendors.

Manufacturers Module

- **Add Manufacturer:** Name and address required.
- **View Manufacturers:** List with delete options.

Sales Module

- **Add Sale:** Select medicine, quantity, and customer.
- **View Sales:** Displays all sales transactions including total price.

Testing Features

Feature	Test Scenario
Add Entity	Add a new entry in form, check if it appears below
Delete Entity	Delete an entry and ensure it is removed
Sale Entry	Try a valid and invalid sale (e.g., high quantity)
Reloading Data	Refresh the page to see persistent entries

Troubleshooting

Issue	Solution
Backend not running	Ensure Node.js is installed, then node server.js
Frontend not showing data	Check backend is running on localhost:5000
Form submit does nothing	Open browser console, check for API or CORS errors
Data not saved	Ensure backend has write access to the /data directory
